Art Unit: 1639

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 42-49, drawn to a method for preparing a glycopeptide comprising a glycopeptide of the recited formula, classified in class 530, subclass 300+.
- II. Claims 57-73, drawn to a method of preparing a glycopeptide comprising selecting an aglycone, classified in class 530, subclass 300+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different methods using different components and steps that produces different results/ compounds with different effects and/or functions. For example, the method of Group I is drawn to a method with the recited formula which is not found in Group II.

Art Unit: 1639

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I is not required for Group II specifically the literature searches, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

If Group I is elected, applicant(s) is/are to elect a single species from the recited formula A1-A7.

If Group II is elected, applicants are to elect a protecting groups as recited in claim 71.

Each of the species covered in each of the genus recited in the formula or protecting groups differs in structure and mode of action. A prior art reference anticipating one species would not render obvious the other species.

Applicant(s) is/are required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 42 and 57 are generic.

Applicant(s) is/are advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all

Art Unit: 1639

claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant(s) will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant(s) must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant(s) traverse on the ground that the species are not patentably distinct, applicant(s) should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant(s) is/are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1639

Applicant(s) is/are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
